## SKILLS

- Languages/Frameworks: Javascript, VueJs, React, Typescript, HTML5, CSS3, SCSS, Tailwind, Bootstrap
- Software/Tools: Git, VSCode, Github, Figma, Firebase, Slack.

## EDUCATION

**B.Sc Physics, Lagos State University (in view)**

**2019 - 2023.**

- Thermodynamics and statistical mechanics,

## WORK EXPERIENCE

**Frontend Engineer, Aristosoft Technologies**

**August 2022 - Present.**

- Responsible for translating new design elements into reusable components to be used on features by the developer.
- Built a rebranded web application that led to an increase in daily signup and usage .
- Improved Performance of existing frontend projects by making use of modern Javascript, semantic HTML and image optimization practices.
- Collaborated with a development team to make technical decisions on solutions to be used in new future projects
- Technologies used: Javascript , VueJS, NuxtJS, Git, Netlify, Gitlab.

**Frontend Engineer, Living Faith Church Ictg.**

**January 2022 - August 2022.**

- Collaborated on a team to design and develop new user interfaces that helped automate certain processes
- Developed a web application that helped reduce the time it took to sign up new service unit members.
- Led efforts to educate junior members on some concepts of web programming that helped inspire them in creating their first webpage.
- Technologies used: Javascript , Vue, Firebase, Netlify.

**Software Engineering intern HiiT PLC.**

**August 2021 - December 2021.**

- Redesigned and developed some static sites during the process of the training.
- Collaborated and brainstormed with my mates in solving some Javascript algorithms problems.
- Technologies used: HTML5, CSS3, Javascript.

## PROJECTS

**Deacons-Board accreditation portal**

*Vue JS, Javascript, Firebase HTML, CSS, Bootstrap*

- Collaborated in building a portal that verifies and accredit all members that come for the training.

**Examhood**

*Vue JS, NuxtJS, Javascript, HTML, CSS Tailwind CSS*

- Rebuilt an edutech app that prepares students for an examination which led to 3x increase in daily usage.
- Optimized the application code performance which led to a decrease in technical debts and increase in load time.

**Currency-Converter**

*ReactJS, Javascript, HTML, CSS*

- Fetched currency rates from a third Party API thereby converting and displaying them to the user

## **Bolarge Technologies Limited**

*Vue JS, Javascript, firebase, Tailwind,*

- Developed a website that allows easy marketing of services offered by the user/admin.
- Implemented a feature that allows easy communication between the client and the admin using Firebase.

## **Minimal notes**

*Vue JS, Javascript, Html5, CSS*

- Built a note app, where users can add and save the contents of the notes while saving the date and time created.

## **VOLUNTEER EXPERIENCE**

**Web developer, Google Developer Student Club.**

**January 2022 - Present.**

- Contributing to the growth of the club in the areas of Web development, and design in order to create awareness both online and offline.
- Lead a group of people in building a web application that solves quadratic equations using Fortran Language.
